Historical fire incidents
Database records and timing

PYROSENSE | Urbiztondo, Pangasinan

Database snapshot: 20 October 2026, 07:42 AM PHT

Historical rows	Incident records	Weather baseline rows	With fire start/end
110	46	64	6

Scope and method

This report uses the configured PostgreSQL database, read through a repeatable-read, read-only transaction. It does not use the earlier seeder-only JSON or randomized response times. All 110 historical rows are included in the embedded data attachment; all 46 positive-count incident records are listed in the report.

Fire duration = fire_out minus fire_started. These timestamps are stored in spot_investigation_report and linked to historical_fire_incidents by incident_id. The historical incident date/time is preserved separately and is not substituted for a missing fire-start timestamp.

Dispatch-to-arrival interval = arrived_at minus dispatched_at, using incident_response_units. It represents the recorded travel interval for the first arrived unit with both times available. It excludes any delay before dispatch and must not be confused with total fire duration.

No new database columns were added. The earlier file 2026_10_18_000001_add_response_time_to_historical_fire_incidents_table.php exists and proposes response_time_minutes and response_time_source, but the migration ledger has no matching entry and neither column exists in the live table. The file was not executed or changed for this report.

Data quality and interpretation

40 incident records lack linked fire-start/fire-out pairs; their durations remain not calculable. The 64 zero-count rows are weather baseline records and are not counted as fire incidents. Several source notes identify month-level dates stored using the first day of the month; those dates are retained as stored.

Timestamps in the incident tables have no timezone. They are displayed exactly as stored, without a UTC-to-local conversion. Only the export timestamp above is converted to Asia/Manila. The database session timezone was UTC.

Contents: measured timing register; complete incident register; source records and notes; zero-count baseline appendix; embedded database-record attachment.

1. Measured timing register

Only records with linked start and end timestamps appear below. Duration format is hours:minutes:seconds; calculations retain recorded seconds.

Record IDs	Barangay	Fire started	Fire out	Fire duration	Dispatch to arrival
H87 I11 / S1	Angatel	2026-09-13 23:17:00	2026-09-13 23:55:00	00:38:00	00:01:15
H89 I13 / S2	Poblacion	2026-09-15 06:50:00	2026-09-15 07:10:00	00:20:00	00:00:34
H91 I15 / S3	Batangcaoa	2026-09-15 19:50:00	2026-09-15 20:20:00	00:30:00	00:02:47
H97 I21 / S4	Sawat	2026-09-19 05:45:00	2026-09-19 06:06:00	00:21:00	00:00:12
H104 I27 / S5	Poblacion	2026-09-25 05:48:00	2026-09-25 17:16:00	11:28:00	00:00:53
H107 I31 / S6	Bayaoas	2026-09-27 10:51:00	2026-09-27 17:37:00	06:46:00	00:01:04

Observed fire durations: minimum 20 minutes; median 34.0 minutes; maximum 688 minutes. These summarize 6 stored pairs only and do not establish actual station performance.

Recorded dispatch and arrival timestamps

Record IDs	Dispatched	Arrived	Interval	Record check
H87 / I11	2026-09-13 23:47:17	2026-09-13 23:48:32	00:01:15	No chronology conflict detected
H88 / I12	2026-09-14 00:21:11	Not recorded	Not calculable	No arrival recorded
H89 / I13	2026-09-15 07:08:42	2026-09-15 07:09:16	00:00:34	No chronology conflict detected
H91 / I15	2026-09-15 20:11:52	2026-09-15 20:14:39	00:02:47	No chronology conflict detected
H97 / I21	2026-09-27 16:37:39	2026-09-27 16:37:51	00:00:12	Dispatch occurs after recorded fire out; review required
H104 / I27	2026-09-27 10:57:16	2026-09-27 10:58:09	00:00:53	Dispatch occurs after recorded fire out; review required
H107 / I31	2026-09-27 16:35:32	2026-09-27 16:36:36	00:01:04	No chronology conflict detected

Important issue: incidents I21 and I27 have dispatch/arrival timestamps dated after their recorded fire-out timestamps. Their intervals are arithmetic differences from stored values and require source-record review. No dates or times have been corrected or invented.

2. Complete incident register

46 rows with incident_count greater than zero. H = historical record ID; I = linked incident ID. NR = not recorded; NC = not calculable. Dates and times are preserved as stored.

3. Incident source records

These details preserve database values and source notes. A stored source label or verification flag is reported as data, without independent verification. Complete original field values, including weather fields and audit timestamps, are embedded in the PDF attachment.

H1 | 2023-01-01 | Poblacion
Incident link: Not recorded
Location: Barangay Poblacion, near station and near hydrant
Classification / cause: accidental / Open flame from rubbish fire
Recorded date / time: 2023-01-01 / 17:38:00
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): Not recorded
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: High density lightweight material or shanty house. Month-level record with no exact day provided; first day of month used as placeholder.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H2 | 2023-03-01 | Bayaoas
Incident link: Not recorded
Location: Sitio Bangul, Barangay Bayaoas
Classification / cause: accidental / Open flame from rubbish fire
Recorded date / time: 2023-03-01 / 12:30:00
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): Not recorded
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Low density substantial house, no near hydrant, far from station. Month-level record with no exact day provided; first day of month used as placeholder.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H3 | 2023-07-01 | Pasibi East
Incident link: Not recorded
Location: Barangay Pasibi East
Classification / cause: accidental / Electrical ignition caused by arcing
Recorded date / time: 2023-07-01 / 15:30:00
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): Not recorded
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Low density two storey or semi concrete residential house, no near hydrants, far from fire station. Month-level record with no exact day provided; first day of month used as placeholder.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H4 | 2023-08-01 | Dalanguiring
Incident link: Not recorded
Location: Sitio Valdez, Barangay Dalanguiring
Classification / cause: accidental / Open flame from cooking (LPG / gas stove)
Recorded date / time: 2023-08-01 / 07:40:00
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): Not recorded
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Low density two storey residential house, no near hydrants, far from station. Month-level record with no exact day provided; first day of month used as placeholder.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H5 | 2024-01-01 | Gueteb
Incident link: Not recorded
Location: Barangay Gueteb
Classification / cause: accidental / Open flame from kerosene lamp
Recorded date / time: 2024-01-01 / 19:24:00
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): Not recorded
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Low density shanty house, no near hydrant, far from station. Month-level record with no exact day provided; first day of month used as placeholder.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H6 | 2025-01-01 | Poblacion
Incident link: Not recorded
Location: Barangay Poblacion, front of UIS
Classification / cause: undetermined / Not recorded
Recorded date / time: 2025-01-01 / Not recorded
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): 10000.00
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Motorcycle fire. Month-level record with no exact day and time provided; first day of month used as placeholder.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H7 | 2025-02-01 | Poblacion
Incident link: Not recorded
Location: Barangay Poblacion, Urbiztondo Integrated School storage
Classification / cause: undetermined / Not recorded
Recorded date / time: 2025-02-01 / Not recorded
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): 20000.00
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Month-level record with no exact day and time provided; first day of month used as placeholder.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H8 | 2025-05-03 | Pasibi West
Incident link: Not recorded
Location: Barangay Pasibi West, A66CT Farm storage
Classification / cause: accidental / Electrical ignition overloading
Recorded date / time: 2025-05-03 / 11:41:00
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): 1400000.00
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Large storage fire.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H9 | 2025-12-01 | Real
Incident link: Not recorded
Location: Barangay Real
Classification / cause: undetermined / Not recorded
Recorded date / time: 2025-12-01 / Not recorded
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): 7000.00
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Residential fire, no near fire hydrant, away from station. Month-level record with no exact day and time provided; first day of month used as placeholder.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H10 | 2026-01-01 | Bayaoas
Incident link: Not recorded
Location: Barangay Bayaoas
Classification / cause: accidental / Thrown cigarette butt
Recorded date / time: 2026-01-01 / 05:38:00
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): 10500.00
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Residential single and two family. No near hydrant and far away from station.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H11 | 2026-02-26 | Dalanguiring
Incident link: Not recorded
Location: Sitio Valdez, Barangay Dalanguiring
Classification / cause: accidental / Accidental unattended smoldering coconut leaves
Recorded date / time: 2026-02-26 / 09:05:00
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): 1500.00
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes
Source notes: Involved storage.
Linked start/end / fire duration: No linked timestamp pair / not calculable

H12 | 2026-03-25 | Angatel
Incident link: Not recorded
Location: Barangay Angatel
Classification / cause: accidental / Electrical ignition due to pinch wire
Recorded date / time: 2026-03-25 / 14:28:00
Count / injured / deaths: 1 / 0 / 0
Estimated damage (PHP): 50000.00
Source: Urbiztondo historical fire dataset (bfp_record)
Source reference: Seeder import from user-provided 2023-2026 records
Stored verification flag: Yes

Appendix A. Zero-count weather baseline rows

The following 64 database records have incident_count = 0 and are excluded from the fire incident totals and timing statistics. Their stored source type is other. Original notes identify them as synthetic monthly weather baselines derived from Open-Meteo archive data.

Appendix B. Attached records and calculation notes

The PDF includes one embedded attachment named historical-fire-incidents-database-records.json. Open the Attachments panel in a PDF reader to access it. Some browser PDF viewers do not display attachments; the visible tables and incident source records remain available in every reader.

The attachment contains all 110 historical table rows with all original field values, the 6 linked investigation timestamp records, the 7 linked response-unit timestamp rows, barangay names used for the joins, extraction metadata, and derived timing values. Derived fields exist only in this export, not in the database.

Database integrity: transaction_read_only = on. The transaction was rolled back after SELECT queries. No migration, seeder, test, insert, update, delete, or schema alteration was run.

Attachment SHA-256: 7744c9e43a3acfb9882b364ac277155116112088a71922fd8f82cf16655ea0e9

Recommended follow-up reviews

1. Verify the chronology for incidents I21 and I27 against the original dispatch and investigation records.

2. Supply missing start/end or dispatch/arrival records for incidents marked not calculable.

3. Review the earlier unapplied response-time migration file before any future migration run; this report does not require those columns.
